

Methodological Note

The information provided has been manually collated in a locally held excel database which is then sorted to provide the relevant outputs required by the ABPI. This information has been sourced from invoices coded into the financial systems for the relevant period. All invoices paid are in GBP. The financial values provided exclude VAT and relate to the actual monetary value transacted. Where the company has employed an HCP, we have used the net value to report the ToV figure.

Piramal Critical Care clearly defines the cost definitions, as these are defined at source when inputting transactions into the financial systems.

The company worked closely with one Specialist KOL to provide insights and support for the launch of one of our new products for Neonatal and Paediatric Hypotension. There were 2 payments this year and we have included this ToV of this kind to the Fees section as a Consultation Fee. This was the only activity undertaken by the HCP. The consent of the HCP has been obtained for the relevant year.
